Assumptions

- Information ecosystems will operate across highly networked, distributed, diverse computing environments.

Assumptions

- Information ecosystems will operate across highly networked, distributed, diverse computing environments.
- Resources will move across these computing environments as well as different information ecosystems.

Assumptions

- Information ecosystems will operate across highly networked, distributed, diverse computing environments.
- Resources will move across these computing environments as well as different information ecosystems.
- Multiple information ecosystems will continue to use different policy languages, depending on the types of rules and rights models required for expressing their respective policies.

Assumptions

- Information ecosystems will operate across highly networked, distributed, diverse computing environments.
- Resources will move across these computing environments as well as different information ecosystems.
- Multiple information ecosystems will continue to use different policy languages, depending on the types of rules and rights models required for expressing their respective policies.
- No single policy language will be able address the policy expression requirements of different information ecosystems. Policy languages will continue to change and evolve using different logics to express various usage semantics.
